

High Tech Pur

Racing lever to the PVM radial brake master cylinder

This lever, which was developed for the endurance racers in the motorcycle racing scene, folds back in case of a crash and does not break off as is usually the case. This makes it possible to race on and also protects the main brake cylinder.

Technical Specifications

- fits the PVM radical brake master cylinder and clutch cylinder
- made from strong, wear-resistant aluminium
- all adjustment possibilities have been retained as for the original part
